

Multipurpose Reloading Complex has increased financing of the ecological programme by 5.6 times

25 April 2017

In the 1st quarter of 2017 “Multipurpose Reloading Complex, LLC” (MRC) in the port of Ust-Luga (Leningrad region) spent 1.96 mln roubles for the implementation of nature protection measures, which is 5.6 times more than during the same period of last year.

Such growth came as a result of the increased spending for modernization of the terminal's environmental facilities. For instance, in order to comply with the requirements of environmental legislation, MRC reconstructed temporary waste accumulation areas.

During the same period, in order to avoid possible contaminations, the company monitored the quality of atmospheric air on the boundary of sanitary protection zone. As part of water resources protection plan, MRC carried out systematic control over the quality of natural waters and monitored the use of the coastal area.
